

Schroedahl

Directive 2014/34/EU (ATEX)

Exception Declaration

We hereby certify, related to directive 2014/34/EU (explosion protection), the following products to be excluded.

Our company Schroedahl GmbH is not joining the field of application of the directive 2014/34/EU with the products.

- Automatic Recirculation Valves for pump protection
- Back Pressure Valves and
- Single or Multistage Throttle Devices (orifices).

Explanation:

1. Above mentioned valves are used only as a pressure boundary component (fittings) in the systems/plant.
2. Above mentioned valves are used for liquid mediums only. Gaseous mediums are excluded.
3. The tight pressure boundary parts of the abovementioned valves prevent the contact between the medium and the ambient.
4. The valves do not have any source of ignition which can trigger an explosion.

We like to point out that Schroedahl GmbH is certified by TUEV-RHEINLAND according to the guideline 2014/68/EU. Therefore a further CE-certification according to guideline 2014/34/EU is not necessary.
